

## Crosstex/SPSmedical Launches **SANI ProZyme™** Enzymatic Detergent and **SANI Glut™** Glutaraldehyde 3% Solution

RUSH, NY April, 2015 – Crosstex/SPSmedical, a leading global provider of infection prevention and control, and sterility assurance products, has introduced **SANI ProZyme™** Enzymatic Detergent and **SANI Glut™** Glutaraldehyde 3% High Level Disinfectant Solution for the cleaning and reprocessing of heat-sensitive semi-critical devices.

Fast acting and effective, **SANI Glut** Glutaraldehyde 3% Solution is FDA cleared for 25 minute high level disinfection, 10 hour sterilization at 25°C, and has up to a 28 day reuse period.

Gentle and safe, **SANI ProZyme** Enzymatic Detergent is designed to remove organic debris from medical instruments, including endoscopes. **SANI ProZyme** contains a proteolytic enzyme that breaks down and removes organic soils, holding them in suspension and avoiding redepositing on the cleaned surfaces. Unlike other detergents on the market, **SANI ProZyme** does not contain borax, making it safer to use.

“The introduction of **SANI ProZyme** and **SANI Glut** expands Crosstex’ portfolio of cleaning and high level disinfectant solutions, further solidifying our position as a global leader in the infection prevention and safety market”, said Crosstex/SPSmedical Director of Medical Sales John Sullivan.
